

Highly Secure Interactions and Transactions In A Single Session

Simply and securely exchange PII or deliver documents for eSignature to speed transactions and reduce abandon rates.

Exchange Info and Sign Documents in a Single, Streamlined Session

Journey enables businesses to easily push a request for information, upload documents or capture a signature over a mobile phone or browser session, making it easy and secure to complete a new sale or upgrade in a single session.

No more clunky recordings of customers accepting legal agreements or abandon rates from forcing customers to other channels, like email.

Secure, Privacy-Preserving, and Simple Information or eSignature Capture

Initiate and complete eSignatures from any device eliminating the need to send customers to email or a branch to complete a transaction.

Journey orchestrates the process with all data individually encrypted and routed via our ultra-secure Zero Knowledge Network

The agent is automatically connected to a verified customer able to securely share sensitive data that is validated, but not exposed to the agent

Why Journey

- Secure and user friendly interactions across all channels, enabling you to capture information from customers, capture a signature or upload documents in a single session.
- Automate the information exchange or signature process and improve the customer experience
- Future proof against security and privacy regulations like PCI DSS, GDPR, CCPA, and more
- All interactions are secure and privacy preserving over Journey's Zero Knowledge Network®, so sensitive information can be captured but never seen or shared unnecessarily.
